

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

21CSS101J – Programming for Problem Solving Unit I

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

COURSE LEARNING RATIONALE
(CLR)

programming constructs in C

The purpose of learning this course is to:

(CLN)					
CLR -1:	Think and evolve a logically to a pseudocode that can be progra	<u> </u>	thm into a	flowchart an	nd
CLR -2:	Utilize the logical operators engineering and real-time	and expressions	to solve	problems	in
CLR -3:	Store and retrieve data in a sing	le and multidimens	sional array		
CLR -4:	Utilize custom designed functi can be repeatedly used in any ap		sed to perfo	orm tasks ai	nd
CLR -5:	Create storage constructs using files to store and retrieve informations.		nions. Crea	te and Utili	ze
CLR -6:	Create a logical mindset to so	olve various engine	eering appl	lications usi	ng

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

COURSE LEAF	RNING
OUTCOMES	(CLO)

At the end of this course, learners will be able to:

CLO -1: Identify methods to solve a problem through computer programming. List the basic data types and variables in C

CLO -2: Apply the logic operators and expressions. Use loop constructs and recursion. Use array to store and retrieve data

CLO -3: Analyze programs that need storage and form single and multi-dimensional arrays. Use preprocessor constructs in C

CLO -4: Create user defined functions for mathematical and other logical operations.

Use pointer to address memory and data

CLO -5: Create structures and unions to represent data constructs. Use files to store and retrieve data

CLO -6: Apply programming concepts to solve problems. Learn about how C programming can be effectively used for solutions

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

UNIT I

INTRODUCTION

Evolution of Programming & Languages - Problem Solving through Programming - Creating Algorithms - Drawing Flowcharts - Writing Pseudocode - Evolution of C language, its usage history - Input and output functions: Printf and scanf -Variables and identifiers – Expressions - Single line and multiline comments - Constants, Keywords - Values, Names, Scope, Binding, Storage Classes - Numeric Data types: integer -

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

UNIT I

INTRODUCTION

floating point - Non-Numeric Data types: char and string - Increment and decrement operator - Comma, Arrow and Assignment operator - Bitwise and Sizeof operator

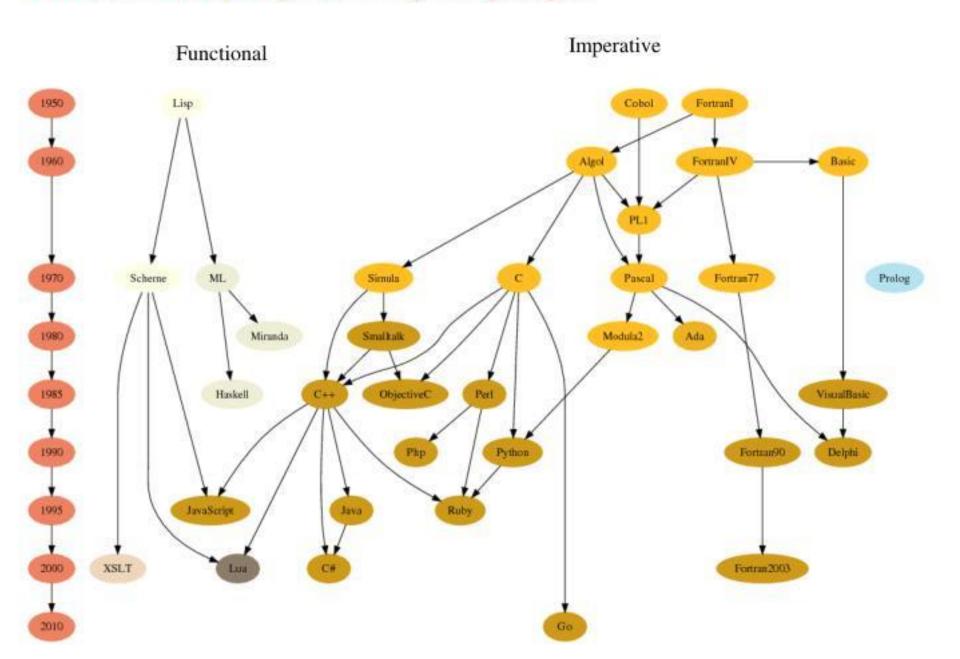

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 1 Evolution of Programming & Languages

- ☐ A Computer needs to be given instructions in a programming language that it understands
- ☐ Programming Language
 - ☐ Artificial language that controls the behavior of computer
 - Defined through the use of syntactic and semantic rules
 - ☐ Used to facilitate communication about the task of organizing and manipulating information
 - ☐ Used to express algorithms precisely

Evolution of programming languages

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 1 Evolution of Programming & Languages Contd...

Period	Programming Langugaes
1950's	Creation of high-level languages
1960's	Forth. Simula I. Lisp, Cobol
1970's	Pascal, C language
1980's	ML. Smalltalk, C++
1990's	Java, Perl, Python languages
2000	Internet Programming
2010	Concurrency and asynchronicity. JavaScript and Go language

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 2 Problem Solving through Programming

- □ **Problem** Defined as any question, something involving doubt, uncertainty, difficulty, situation whose solution is not immediately obvious
- ☐ Computer Problem Solving
 - ☐ Understand and apply logic
 - ☐ Success in solving any problem is only possible after we have made the effort to understand the problem at hand
 - Extract from the problem statement a set of precisely defined tasks

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 2 Problem Solving through Programming Contd...

i. Creative Thinking

- ☐ Proven method for approaching a challenge or opportunity in an imaginative way
- ☐ Process for innovation that helps explore and reframe the problems faced, come up with new, innovative responses and solutions and then take action
- ☐ It is generative, nonjudgmental and expansive
- ☐ Thinking creatively, a lists of new ideas are generated

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

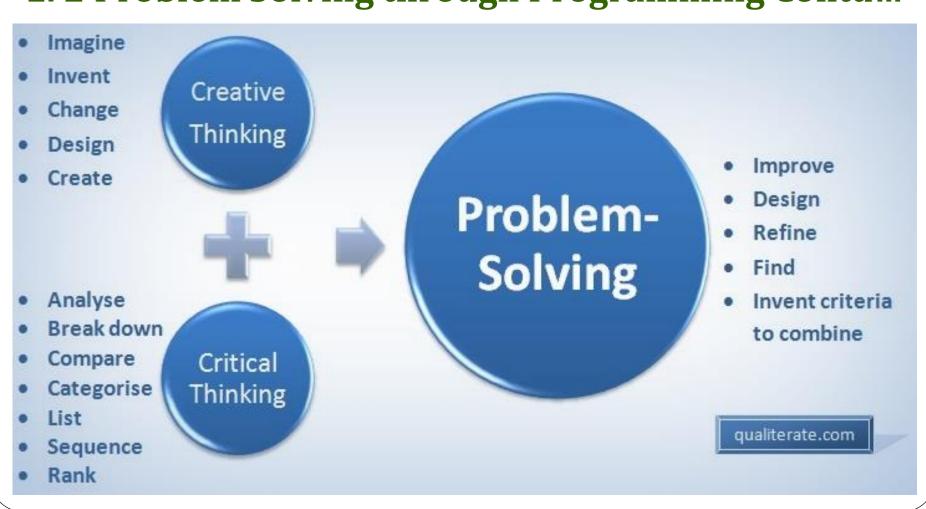

1. 2 Problem Solving through Programming Contd...

ii. Critical Thinking

- ☐ Engages a diverse range of intellectual skills and activities that are concerned with evaluating information, our assumptions and our thinking processes in a disciplined way so that we can think and assess information more comprehensively
- ☐ It is Analytical, Judgmental and Selective
- ☐ Thinking critically allows a programmer in making choices

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

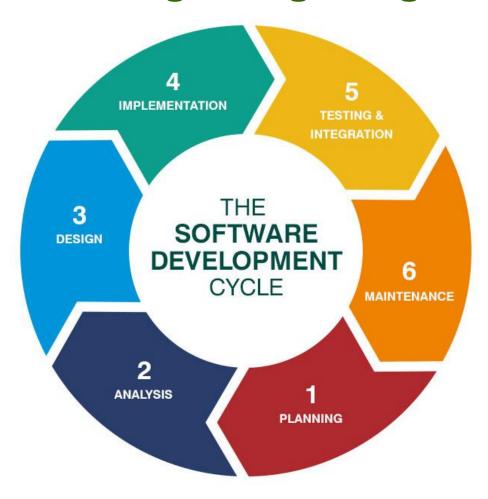

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

- Program Set of instructions that instructs the computer to do a task
- ☐ Programming Process
 - *a) Defining* the Problem
 - b) Planning the Solution
 - c) Coding the Program
 - d) Testing the Program
 - *e) Documenting* the Program

SRM INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

- ☐ A typical programming task can be divided into two phases:
- i. Problem solving phase
 - ☐ Produce an ordered sequence of steps that describe solution of problem this sequence of steps is called an *Algorithm*
- ii. Implementation phase
 - ☐ Implement the program in some programming language
- ☐ Steps in Problem Solving
 - a) Produce a general algorithm (one can use *pseudocode*)

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

- b) Refine the algorithm successively to get step by step detailed *algorithm* that is very close to a computer language
- c) Pseudocode is an artificial and informal language that helps programmers develop algorithms
 - ☐ Pseudocode is very similar to everyday English

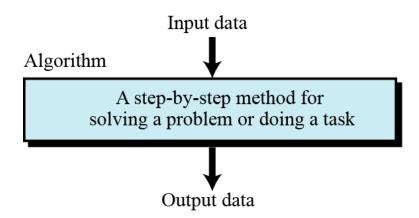

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 3 Creating Algorithms

☐ An informal definition of an algorithm is:

ī

Algorithm: a step-by-step method for solving a problem or doing a task.

TEAN-TEAP-TEAD

SRM

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 3 Creating Algorithms Contd...

- ☐ What are Algorithms for?
 - ☐ A way to communicate about your problem/solution with others
 - ☐ A possible way to solve a given problem
 - ☐ A "formalization" of a method, that will be proved
 - ☐ A mandatory first step before implementing a solution
- □ *Algorithm Definition* "A finite sequence of unambiguous, executable steps or instructions, which, if followed would ultimately terminate and give the solution of the problem"

□ Notations

SRM

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 3 Creating Algorithms

- ☐ Starting point
 - ☐ Step Numbers Positions in Algorithm
 - ☐ Incoming Information Input
 - ☐ Control Flow Order of evaluating Instructions
 - Statements
 - ☐ Outgoing Information Output
 - ☐ Ending Point

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 3 Creating Algorithms Contd...

- ☐ Properties of an algorithm
 - ☐ **Finite**: The algorithm must eventually terminate
 - ☐ **Complete**: Always give a solution when one exists
 - ☐ Correct (sound): Always give a correct solution
- ☐ Rules of Writing an Algorithm
 - ☐ Be consistent
 - ☐ Have well Defined input and output
 - ☐ Do not use any syntax of any specific programming language

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 3 Creating Algorithms Contd...

- ☐ Algorithm development process consists of five major steps
 - ☐ **Step 1**: Obtain a description of the problem
 - □ **Step 2:** Analyze the problem
 - ☐ **Step 3:** Develop a high-level algorithm
 - ☐ Step 4: Refine the algorithm by adding more detail
 - ☐ **Step 5:** Review the algorithm

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 3 Creating Algorithms Contd...

Example

□ Problem

- a) Develop an algorithm for finding the largest integer among a list of positive integers
- b) The algorithm should find the largest integer among a list of any values
- c) The algorithm should be general and not depend on the number of integers

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 3 Creating Algorithms Contd...

□ Solution

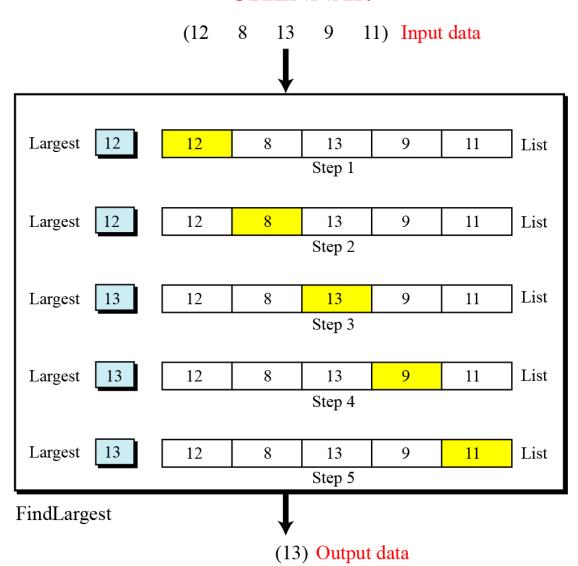

- a) To solve this problem, we need an intuitive approach
- b) First use a small number of integers (for example, five), then extend the solution to any number of integers
- c) The algorithm receives a list of five integers as input and gives the largest integer as output

LIEUW-IEUP-LEUD

SRM

INSTITUTE OF SCIENCE AND TECHNOLOGY,

CHENNAI.

INSTITUTE OF SCIENCE AND TECHNOLOGY,

CHENNAI.

(12 8 13 9 11) **Input data**

Set Largest to the first number.

Step 1

If the second number is greater than Largest, set Largest to the second number.

Step 2

If the third number is greater than Largest, set Largest to the third number.

Step 3

If the fourth number is greater than Largest, set Largest to the fourth number.

Step 4

If the fifth number is greater than Largest, set Largest to the fifth number.

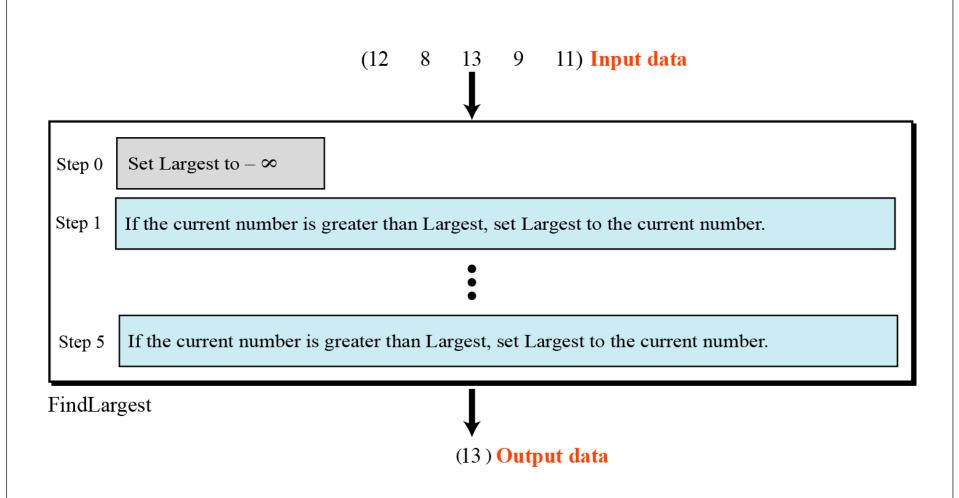

Step 5

FindLargest

(13) Output data

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

Input data (*n* integers) Repeat the following step *n* times: If the current integer is greater than Largest, set Largest to the current integer.

FindLargest

Set Largest to −∞

Largest

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 3 Creating Algorithms Contd...

Example 2: Print 1 to 20

□ **Step 1:** Start

 \Box **Step 2:** Initialize X as 0,

□ **Step 3:** Increment X by 1,

□ **Step 4:** Print X,

□ **Step 5:** If X is less than 20 then go back to step 2.

□ **Step 6**: Stop

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 3 Creating Algorithms Contd...

Example 3

Convert Temperature from Fahrenheit (°F) to Celsius (°C)

- □ **Step 1:** Start
- □ **Step 2:** Read temperature in Fahrenheit
- □ **Step 3:** Calculate temperature with formula C=5/9*(F-32)
- □ **Step 4:** Print C
- □ **Step 5**: Stop

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 3 Creating Algorithms Contd...

Example 4

Algorithm to Add Two Numbers Entered by User

- □ **Step 1**: Start
- □ **Step2**: Declare variables num1, num2 and sum.
- □ **Step 3:** Read values num1 and num2.
- □ **Step 4:** Add num1 and num2 and assign the result to sum.

sum←num1+num2

□ Step 5: Display sum Step 6: Stop

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 3 Creating Algorithms Contd...

☐ Write an Algorithm to:

- 1) Find the Largest among three different numbers
- 2) Find the roots of a Quadratic Equation
- 3) Find the Factorial of a Number
- 4) Check whether a number entered is Prime or not
- 5) Find the Fibonacci Series

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 4 Drawing Flowcharts

- Diagrammatic representation
- ☐ Illustrates sequence of operations to be performed
- Each step represented by a different symbol
 - ☐ Each Symbol contains short description of the Process
- Symbols linked together by arrows
- ☐ Easy to understand diagrams
- ☐ Clear Documentation
- ☐ Helps clarify the understanding of the process

Flowchart Symbols

Flowcharts are used to illustrate algorithms in order to aid in the visualisation of a program.

Flowcharts are to be read top to bottom and left to right in order to follow an algorithms logic from start to finish. Below is an outline of symbols used in flowcharts.

Terminator

Terminator

Used to represent the Start and end of a program with the Keywords BEGIN and END.

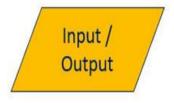

Decision

Used to split the flowchart sequence into multiple paths in order to represent SELECTION and REPETITION.

Process

Process

An instruction that is to be carried out by the program.

Input / Output

Used to represent data entry by a user or the display of data by the program.

Arrow

Indicates the flow of the algorithm pathways.

Subprogram

References another program within the program.

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAL.

Collate

Sort

Merge

Database

sorting.

Indicates a step that organizes

Indicates a step that organizes

Indicates a step that combines

Indicates a list of information

with a standard structure that

allows for searching and

Internal storage

Indicates an internal

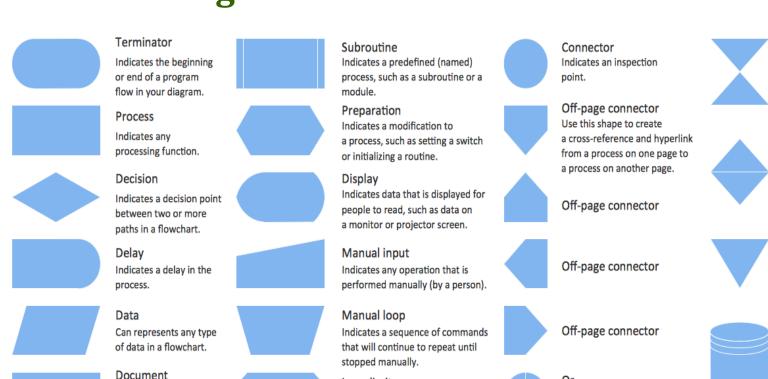

storage device.

items list sequentially.

multiple sets into one.

data into a standard format.

1. 4 Drawing Flowcharts Contd...

Loop limit

the end of a loop.

Stored data

Indicates the start of a loop. Flip

Indicates any type of stored data.

the shape vertically to indicate

Logical OR

Logical AND

Summing junction

Indicates data that can be

read by people, such as

Multiple documents

printed output.

Indicates multiple

documents.

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 4 Drawing Flowcharts Contd...

- **□** Guidelines for Preparing Flowchart
 - ☐ Logical order of requirements
 - ☐ Ensure that Flowchart has logical *Start* and *Stop*
 - ☐ Direction is from Top to bottom
 - ☐ Only one flow line is used with Terminal Symbol
 - □ Only one flow line should come out of a Process symbol
 - □ Only one flow line should enter a Decision symbol but multiple lines may leave the Decision symbol

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

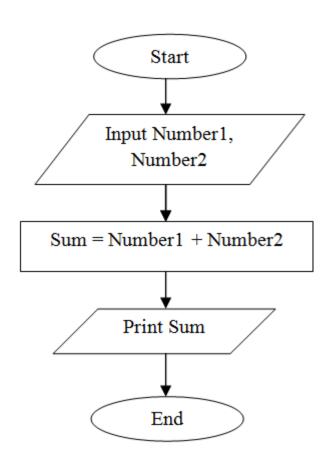

1. 4 Drawing Flowcharts Contd...

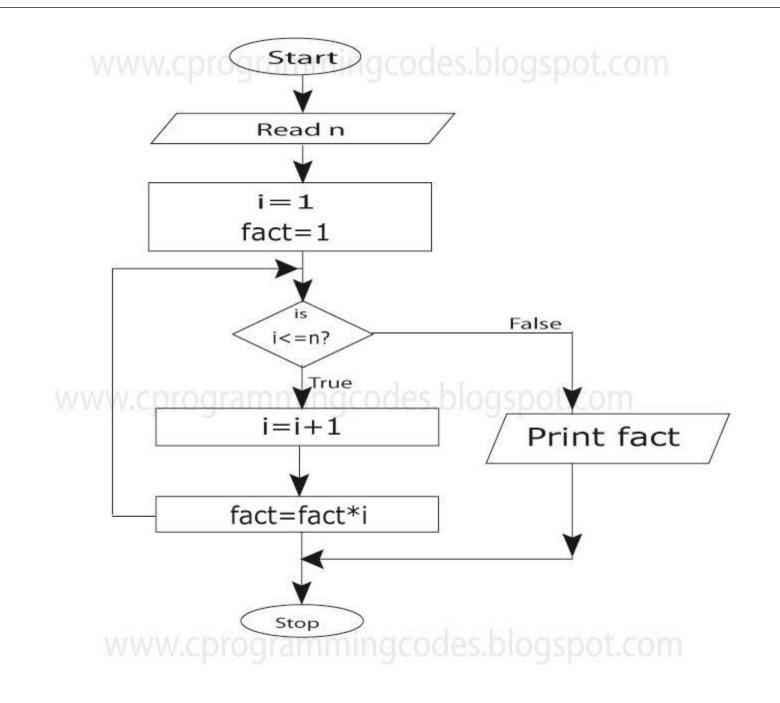

- **□** Guidelines for Preparing Flowchart Contd...
 - Write briefly within Symbols
 - ☐ Use connectors to reduce number of flow lines
 - Avoid intersection of flow lines
 - ☐ Test Flowchart through simple test data
 - ☐ Clear, Neat and easy to follow

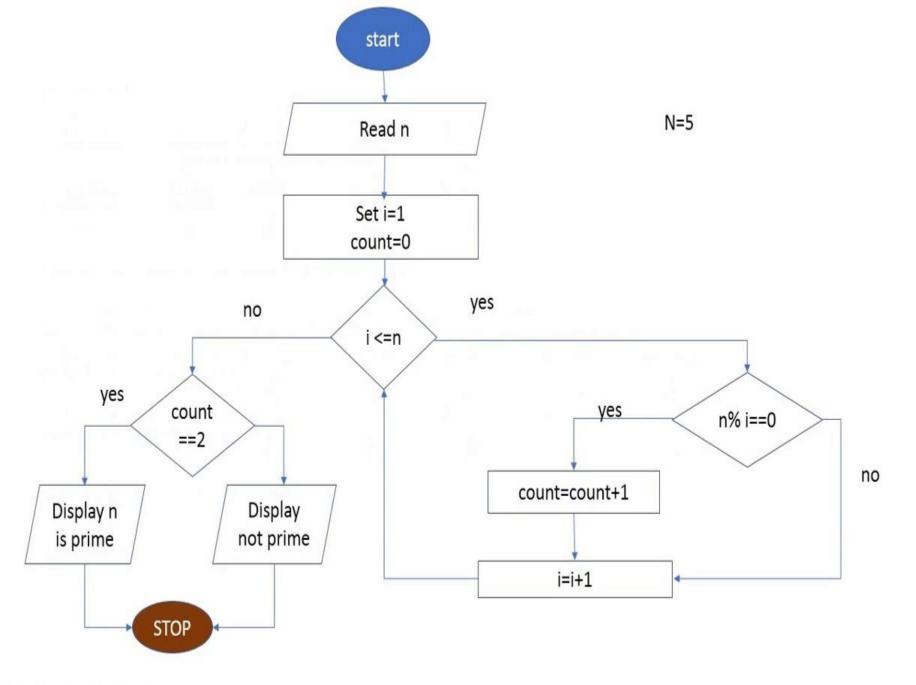

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 4 Drawing Flowcharts Contd...

ZIEWY-IEW-IEWD

SRM

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 5 Writing Pseudocode

- Pseudo Imitation / False
- □ Code Instructions
- □ **Goal**: To provide a high level description of the Algorithm
- **Benefit:** Enables programmer to concentrate on Algorithm
- ☐ Similar to programming code
- Description of the Algorithm
- No specific Programming language notations
- Pseudo Code transformed into actual program code

TEMN-LEAP-LEAD

SRM

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

- a) Guidelines for Writing Pseudo Code
 - **☐** Write only one Statement per line
 - ☐ Example Pseudo Code for calculating Salary
 - 1. **READ** name, hourly rate, hours worked, deduction rate
 - 2. Gross pay = hourly rate * hours worked
 - 3. deduction = gross pay * deduction rate
 - 4. net pay = gross pay deduction
 - 5. **WRITE** name, gross, deduction, net pay

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

- b) Capitalize Initial Keyword
 - Keywords to be written in capital letters
 - Examples: READ, WRITE, IF, ELSE, WHILE, REPEAT, PRINT
- c) Indent to show Hierarchy
 - Indentation shows the structure boundaries
 - Sequence
 - □ Selection
 - Looping

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

- d) End Multiline structures
 - Each structure must end properly
 - Example: IF statement must end with ENDIF
- e) Keep Statements Language independent
 - Resist the urge to write Pseudo Code in any programming language

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

- Advantages
 - Easily typed in a Word document
 - Easily modified
 - Simple to Use and understand
 - Implements Structured Concepts
 - No special symbols are used
 - No specific syntax is used
 - Easy to translate into Program

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

- Disadvantages
 - No accepted Standard
 - Cannot be compiled and executed

TEMP LEAD TO SCIENCE AVERT LEAD TO SCIENCE A

SRM

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 5 Writing Pseudocode Contd...

Write an Pseudo Code to:

- 1) Add three numbers and Display the result
- 2) Calculate Sum and product of two numbers
- 3) Input examination marks and award grades according to the following criteria:
 - a) > = 80 Distinction
 - b) > = 60 First Class
 - c) > = 50 Second Class
 - d) < 40 Fail

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 5 Writing Pseudocode Contd...

1. Pseudo Code to Add Three Numbers

- Use Variables: sum, num1, num2, num3 of type integer
- ACCEPT num1,num2,num3
- Sum = num1+num2+num3
- Print sum
- End Program

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 5 Writing Pseudocode Contd...

2. Calculate Sum and product of two numbers

- Use Variables: sum, product, num1, num2 of type real
- DISPLAY "Input two Numbers"
- ACCEPT num1,num2
- Sum = num1+num2
- Print "The sum is", sum
- product = num1*num2
- Print "The product is", product
- End Program

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 5 Writing Pseudocode Contd...

3. Input examination marks and award grades

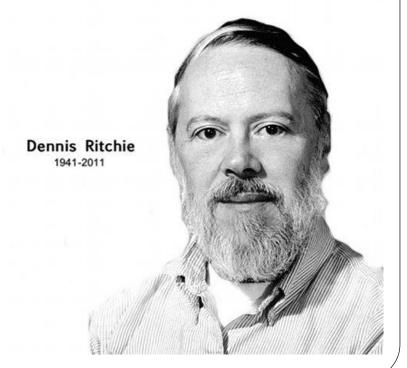

- Use Variables: mark of type integer
- If mark >=80 DISPLAY "Distinction"
- If mark >=60 and mark <80 DISPLAY "First Class"
- If mark >=50 and mark <60 DISPLAY "Second Class"
- If mark <50 DISPLAY "Fail"
- End Program

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 6 History & Evolution of C

- ☐ C General Purpose Programming Language
- ☐ Developed by Dennis Ritchie in 1972
- ☐ Developed at Bell Laboratories
- Principles taken from BCPL and CPL
- ☐ Structured Programming Language
- ☐ C Program
 - ☐ Collection of Functions
 - ☐ Supported by C library

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 6 History & Evolution of C Cont...

Father of C Programming: Dennis Ritchie

Born On	September 9 1941
Born in	Bronxville – New York
Full Name	Dennis MacAlistair Ritchie
Nickname	DMR
Nationality	American
Graduate From	Harvard University
Graduate In	Physics and Applied Mathematics
Webpage	http://cm.bell-labs.com/who/dmr/
Dead On	October 12 2011

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 6 History & Evolution of C Cont...

1960	Algol	International Group
1967	BCPL	Martin Richards
1970	В	Ken Thomson
1972	Traditional C	Dennis Ritchie
1978	K&R C	• kernighan & Ritchie
1989	ANSIC	ANSI Commitee
1990	ANSI/ISO C	ISO Commitee
1999	C99	Standerd Commitee

Evolution of C

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

- ☐ Why the Name "C" was given?
 - ☐ Many of C's principles and ideas were derived from the earlier language B
 - ☐ BCPL and CPL are the earlier ancestors of B Language (CPL is common Programming Language)
 - ☐ In 1967, BCPL Language (Basic CPL) was created as a scaled down version of CPL
 - ☐ As many of the **features were derived from "B" Language the new language was named as "C"**.

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

- ☐ Characteristics of 'C'
 - ☐ Low Level Language Support
 - ☐ Structured Programming
 - ☐ Extensive use of Functions
 - ☐ Efficient use of Pointers
 - Compactness
 - ☐ Program Portability
 - ☐ Loose Typing

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

- ☐ Advantages of C
 - ☐ Compiler based Language
 - ☐ Programming Easy & Fast
 - ☐ Powerful and Efficient
 - ☐ Portable
 - ☐ Supports Graphics
 - ☐ Supports large number of Operators
 - ☐ Used to Implement Datastructures

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

- ☐ Disadvantages of C
 - ☐ Not a strongly typed Language
 - ☐ Use of Same operator for multiple purposes
 - ☐ Not Object Oriented

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 7 Structure of 'C' Program

- ☐ Structure based on Set of rules defined by the Compiler
- **☐** Sections
 - Documentation
 - 2) Preprocessor
 - 3) Global Declaration
 - 4) main() function

- 5) Local Declaration
- 6) Program Statements

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 7 Structure of 'C' Program Contd...

☐ Rules for Writing a C Program

- a) All statements should be written in lower case
- b) All statements should end with a semicolon
- c) Upper case letters are used for symbolic constants
- d) Blank spaces can be inserted between words
- e) No blank space while declaring a variable, keyword, constant
- f) Can write one or more statement in same line separated by comma
- g) Opening and closing of braces should be balanced

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

```
Comment
                        /* Program to Find Area of Circle */
#include <stdio.h>
                              Preprocessor Directives
#include <conio.h>
                              Global Declaration
const float pi = 3.14;
void main()
                       main Function
     float area;
                           Local Declaration & Initialization
     int r;
     printf("Enter the Radius of the Circle");
     scanf("%d", &r);
                                                           Execution
     area = pi * r * r;
     printf("The area of the Circle is %f", area);
    getch();
```

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 7 Structure of 'C' Program Contd...

- 1) Documentation Section
 - Used for providing Comments
 - Comment treated as a single white space by Compiler
 - ☐ Ignored at time of Execution: Not Executable
 - ☐ Comment: Sequence of Characters given between /* and */
 - **Example:** Program Name, Statement description

/* Program to Find Area of a Circle*/

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAL.

1. 7 Structure of 'C' Program Contd...

2) Preprocessor Section

- Also called as Preprocessor Directive
- ☐ Also called as Header Files
- Not a part of Compiler
- ☐ Separate step in Compilation Process
- Instructs Compiler to do required Preprocessing
- ☐ Begins with # symbol
- Preprocessor written within < >

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

- **□** Examples
 - #include <stdio.h>
 - #include <conio.h>
 - #include <math.h>
 - #include <stdlib.h>
 - #define PI 3.1412

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

Directive	Description
#define	Substitutes a preprocessor macro.
#include	Inserts a particular header from another file.
#undef	Undefines a preprocessor macro.
#ifdef	Returns true if this macro is defined.
#ifndef	Returns true if this macro is not defined.
#if	Tests if a compile time condition is true.
#else	The alternative for #if.
#elif	#else and #if in one statement.
#endif	Ends preprocessor conditional.

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

Directive	Description
#error	Prints error message on stderr.
#pragma	Issues special commands to the compiler, using a standardized method.

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

- 3) Global Declaration Section
 - Used to Declare Global variable (or) Public variable
 - Variables are declared outside all functions
 - ☐ Variables can be accessed by all functions in the program
 - Same variable used my more than one function

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

- 4) main() Section
 - main() written in all small letters (No Capital Letters)
 - Execution starts with a Opening Brace : {
 - Divided into two sections: Declaration & Execution
 - **Declaration**: Declare Variables
 - **Executable:** Statements within the Braces
 - Execution ends with a Closing Brace : }
 - *Note:* main() does not end with a semicolon

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

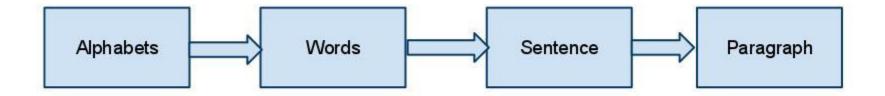

- 5) Local Declaration Section
 - Variables declared within the main() program
 - ☐ These variables are called Local Variables
 - Variables initialized with basic data types

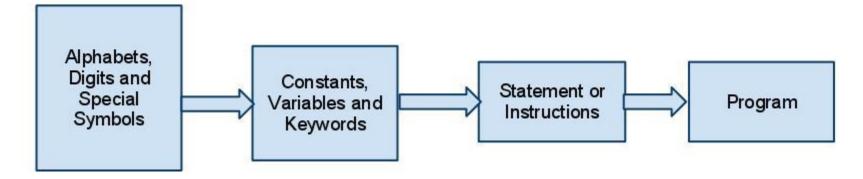

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 8 C Programming Fundamentals

Steps in Learning English Language

Steps in Learning C

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 8 C Programming Fundamentals Contd...

Alphabets	A, B,, Y, Z a, b,, y, z
Digits	0, 1, 2, 3, 4, 5, 6, 7, 8, 9
Special symbols	~ '!@#%^&*()+= \{}
	[]:; "'<>,.?/

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 8 C Programming Fundamentals Contd...

□ C Token - Smallest

individual unit of a C

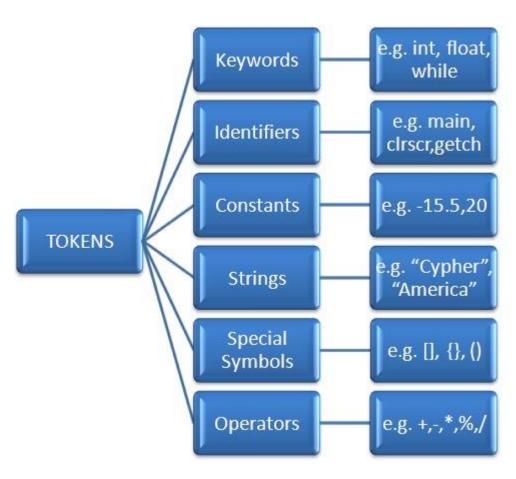

program

☐ C program broken into

many C tokens

☐ Building Blocks of C

program

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAL.

1. 9 Single Line and Multiline Comments

- **□** Comment Definition
 - Used to provide information about lines of code
 - Provide clarity to the C source code
 - ☐ Allows others to better understand what the code was intended to
 - ☐ Helps in debugging the code
 - ☐ Important in large projects containing hundreds or thousands of lines of source code
 - ☐ Types Single line and multiline comment

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 9 Single Line and Multiline Comments Contd...

- a) Single Line Comment
 - Represented by double slash \\

```
#include<stdio.h>
int main(){
    //printing information
    printf("Hello C");
return 0;
}
```

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 9 Single Line and Multiline Comments Contd...

b) Multi-Line Comment

☐ Represented by slash asterisk * ... *\

```
#include<stdio.h>
int main( ){
  /*printing information
   Multi Line Comment*/
  printf("Hello C");
return 0;
```

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 9 Single Line and Multiline Comments Contd...

Single-Line Comments	Multi-Line Comment
Starts with /* and ends with */	Starts with //
All Words and Statements written between /* and */ are ignored	Statements after the symbol // upto the end of line are ignored
Comment ends when */ Occures	Comment Ends whenever ENTER is Pressed and New Line Starts
e.g /* Program for Factorial */	e.g // Program for Fibonacci

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 10 Keywords

- ☐ **Keywords** Conveys special meaning to Compiler
- ☐ Cannot be used as variable names

auto	double	int	struct
break	else	long	switch
case	enum	register	typedef
char	extern	return	union
const	float	short	unsigned
continue	for	signed	void
default	goto	sixeof	volatile
do	if	static	

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

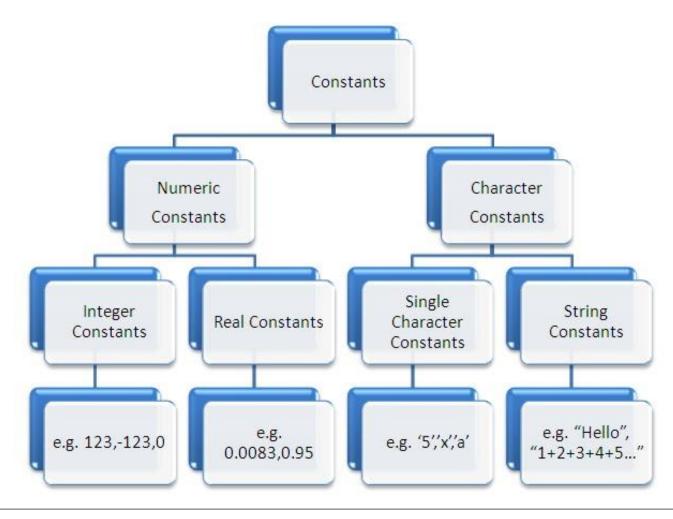

1. 11 Constants

- ☐ Definition :Value does not change during execution
- ☐ Can be a Number (or) a Letter
- **□** Types
 - ☐ Integer Constants
 - ☐ Real Constants
 - ☐ Character Constant
 - ☐ Single Character Constants
 - ☐ String Constants

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 11 Constants Contd...

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 12 Variables & Identifiers

- ☐ Identifier
 - A string of alphanumeric characters that begins with an alphabetic character or an underscore character
 - ☐ There are 63 alphanumeric characters, i.e., 53 alphabetic characters and 10 digits (i.e., 0-9)
 - ☐ Used to represent various programming elements such as variables, functions, arrays, structures, unions
 - The underscore character is considered as a letter in identifiers (Usually used in the middle of an identifier)

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 12 Variables & Identifiers Contd...

- **□** Rules for Identifers
 - Combination of alphabets, digits (or) underscore
 - ☐ First character should be a Alphabet
 - ☐ No special characters other than underscore can be used
 - No comma / spaces allowed within variable name
 - ☐ A variable name cannot be a keyword
 - ☐ Variable names are case sensitive
- ☐ *Variable Definition*: Value changes during execution
- ☐ Identifier for a memory location where data is stored

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 12 Variables & Identifiers Contd...

- ☐ Variable name length cannot be more than 31 characters
- Examples: AVERAGE, height, a, b, sum, mark_1, gross_pay

■ Variable Declaration

- ☐ A variable must be declared before it is used
- Declaration consists of a data type followed by one or more variable names separated by commas.
- ☐ Syntax datatype variablename;

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 12 Variables & Identifiers Contd...

Examples

int a, b, c, sum;

float avg;

char name;

- **□** Variable Initialization
 - Assigning a value to the declared variable
 - ☐ Values assigned during declaration / after declaration

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 12 Variables & Identifiers Contd...

Examples

i. int a, b, c;

a=10, *b*=20, *c*=30;

ii. int a=10, b=10, c=10;

☐ Scope of Variables

- ☐ Local Variables
- ☐ Global Variables

LEARN-LEAD-LEAD

SRM

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 13 Scope of Variables

- □ *Definition*
 - ☐ A scope in any programming is a region of the program where a defined variable can have its existence and beyond that variable it cannot be accessed
- □ Variable Scope is a region in a program where a variable is declared and used
- ☐ The *scope* of a variable is the range of program statements that can access that variable
- ☐ A variable is *visible* within its scope and *invisible* outside it

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 13 Scope of Variables Contd...

- There are three places where variables can be declared
 - a) Inside a function or a block which is called local variables
 - b) Outside of all functions which is called **global** variables
 - c) In the definition of function parameters which are called **formal** parameters

LEARN-LEAD-LEAD

SRM

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 13 Scope of Variables Contd...

a) Local Variables

- ☐ Variables that are declared inside a function or block are called local variables
- ☐ They can be used only by statements that are inside that function or block of code
- □ Local variables are created when the control reaches the block or function containing the local variables and then they get destroyed after that
- ☐ Local variables are not known to functions outside their own

```
/* Program for Demonstrating Local Variables*/
#include <stdio.h>
int main ()
                     /* local variable declaration */
    int a, b;
    int c;
                      /* actual initialization */
   a = 10; b = 20;
   c = a + b;
    printf ("value of a = %d, b = %d and c = %d\n", a, b, c);
    return 0;
```

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 13 Scope of Variables Contd...

b) Global Variables

- Defined outside a function, usually on top of the program
- ☐ Hold their values throughout the lifetime of the program
- ☐ Can be accessed inside any of the functions defined for the program
- Can be accessed by any function
 - ☐ That is, a global variable is available for use throughout the entire program after its declaration

```
/* Program for Demonstrating Global Variables*/
#include <stdio.h>
                  /* global variable declaration */
int g;
int main ()
                   /* local variable declaration */
    int a, b;
                      /* actual initialization */
    a = 10; b = 20;
    g = a + b;
    printf ("value of a = \%d, b = \%d and g = \%d\n", a, b, g);
    return 0;
```

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 13 Scope of Variables Contd...

■ Note: A program can have same name for local and global variables but the value of local variable inside a function will take preference

LEARN-LEAP-LEAD

SRM

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 14 Binding

- ☐ A Binding is an association between an entity and an attribute
 - Between a variable and its type or value
 - Between a function and its code
- ☐ Binding time is the point at which a binding takes place
- Types of Binding
 - a) Design Time
 - b) Compile Time
 - c) Link Time
 - d) Run Time

LEARN-LEAP-LEAD

SRM

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 14 Binding Contd...

a	Design	n Time
~~/		

- ☐ Binding decisions are made when a language is designed
- ☐ Example
 - ☐ Binding of + to addition in C

b) Compile Time

- Bindings done while the program is compiled
- Binding variables to datatypes
- Example
 - int a; float b; char c;

LEARN-LEIP-LEID

SRM

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 14 Binding Contd...

- c) Link Time
 - Compiled code is combined into a full program for C
 - Example
 - Global and Static variables are bound to addresses
- d) Run Time
 - ☐ Any binding that happens at run time is called *Dynamic*
 - ☐ Any binding that happens before run time is called *Static*
 - ☐ Values that are dynamically bound can change

TEMN-LEAP-LEAD

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 15 Storage Classes in C

- ☐ What is a Variable?
- ☐ Storage Class Specifiers tells the Compiler about the following:
 - ☐ Where to Store a Variable
 - ☐ What is the Initial value of the Variable
 - ☐ What is the Lifetime of a Variable
- ☐ **Variable Scope:** Area or block where the variables can be

accessed

- a) Automatic Variables b) External Variables
- c) Static Variables d) Register variables

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 15 Storage Classes in C Contd...

- a) Automatic Variable (Or) Auto Variable (Or) Local Variable
 - Default Storage class
 - Defined inside a Function
 - **Scope of the Variable:** Local to the function block where the variable is defined
 - ☐ Lifetime of the variable's content vanishes after execution
 - ☐ Keyword *Auto* used to Erase content of the variable

```
/* Program to Demonstrate Automatic (Or) Local Variables*/
#include<stdio.h>
#include<conio.h>
void main( )
   int n = 10;
    block1();
    block2();
   printf("In Main Block n=%d", n);
   getch();
block1()
   int n = 20;
   printf("In Block 1 n=%d", n);
```

```
block2()
{
    int n = 30;
    printf("In Block 2 n=%d", n);
}
```

Output

In Block 1 n=20

In Block 2 n= 30

In Main Block n=10

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 15 Storage Classes in C Contd...

- b) External Variable (Or) Global Variable
 - Available to all the Functions
 - Defined outside the Function
 - ☐ Keyword *Declare* is used to define the global variable (Optional)
 - □ Scope of the Variable: Global to all the function blocks
 - ☐ Lifetime of the variable's content vanishes after the entre program is executed

```
/* Program to Demonstrate External / Global Variables*/
#include<stdio.h>
#include<conio.h>
int n = 10;
void main( )
    block1();
    block2();
    clrscr();
    printf("In Main Block n=%d", n);
   getch();
block1()
    printf("In Block 1 n=\%d", n);
    return;
```

```
block2()
{
    printf("In Block 2 n=%d", n);
    return;
}
```

Output

In Block 1 n=10

In Block 2 n= 10

In Main Block n=10

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 15 Storage Classes in C Contd...

c, beatic variables	\mathbf{C}) Static	Variab	les
---------------------	--------------	----------	---------------	-----

- Keyword Static is used to define the variable (Compulsory)
- Variable declared as static is initialized to NULL
- ☐ Value of the Static variable remains the same throughout the program
- **Scope of the Variable:** Local or Global depending on where it is declared
- **Static Global:** Defined outside the Function
- **Static Local:** Defined inside the Function

```
/* Program to Demonstrate Static Variables*/
#include<stdio.h>
#include<conio.h>
void main()
    int x;
    static int y;
   clrscr();
   printf("x=\%dy=\%d", x, y);
   getch();
```

Output

```
x = 28722
```

y = 0

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 15 Storage Classes in C Contd...

d)	Re	gister	Va	ria	bl	es

- Variables stored in the CPU registers instead of Memory
- ☐ Keyword *Register* is used to define the variable
- ☐ Scope of the Variable: Local
- Advantages
 - ☐ CPU register access is faster than memory access
- Disadvantages
 - Number of CPU registers is less
 - ☐ Less Number of variables can be stored in CPU registers

```
/* Program to Demonstrate Register Variables*/
#include<stdio.h>
#include<conio.h>
void main()
   register int n=1;
   clrscr();
   for(n=1; n<=10; n++)
   printf("%d", n);
   getch();
```

1. 16 Datatypes

- ☐ Defines a variable before use
- $lue{}$ Specifies the type of data to be stored in variables
- ☐ Basic Data Types 4 Classes
 - a) int Signed or unsigned number
 - b) float Signed or unsigned number having Decimal Point
 - c) double Double Precision Floating point number
 - d) char A Character in the character Set
- Qualifiers

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 16 Datatypes Contd...

Variable Type	Keyword	Bytes Required	Range	Format
Character (signed)	Char	1	-128 to +127	%с
Integer (signed)	Int	2	-32768 to +32767	%d
Float (signed)	Float	4	-3.4e38 to +3.4e38	%f
Double	Double	8	-1.7e308 to + 1.7e308	%lf
Long integer (signed)	Long	4	2,147,483,648 to 2,147,438,647	%ld
Character (unsigned)	Unsigned char	1	0 to 255	%с
Integer (unsigned)	Unsigned int	2	0 to 65535	%u
Unsigned long integer	unsigned long	4	0 to 4,294,967,295	%lu
Long double	Long double	10	-1.7e932 to +1.7e932	%Lf

TEAN-TEAP-TEAD

SRM

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 16 Datatypes Contd...

- a) Integer Data Type
 - ☐ Whole numbers with a range
 - No fractional parts
 - Integer variable holds integer values only
 - ☐ **Keyword**: int
 - Memory: 2 Bytes (16 bits) or 4 Bytes (32 bits)
 - **Qualifiers:** Signed, unsigned, short, long
 - **Examples:** 34012, 0, -2457

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 16 Datatypes Contd...

- b) Floating Point Data Type
 - Numbers having Fractional part
 - ☐ Float provides precision of 6 digits
 - Integer variable holds integer values only
 - ☐ Keyword: float
 - Memory: 4 Bytes (32 bits)
 - **Examples:** 5.6, 0.375, 3.14756

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 16 Datatypes Contd...

- c) Double Data Type
 - Also handles floating point numbers
 - Double provides precision of 14 digits
 - Integer variable holds integer values only
 - ☐ **Keyword**: float
 - ☐ Memory: 8 Bytes (64 bits) or 10 Bytes (80 bits)
 - **Qualifiers:** long, short

INSTITUTE OF SCIENCE AND TECHNOLOGY, CHENNAI.

1. 16 Datatypes Contd...

- d) Character Data Type
 - □ handles one character at a time
 - ☐ Keyword: char
 - ☐ **Memory:** 1 Byte (8 bits)

1	1	1	1	0	0

Operator	Description	Example
&	Binary AND Operator copies a bit to the result if it exists in both operands.	(A & B) = 12, i.e., 0000 1100
	Binary OR Operator copies a bit if it exists in either operand.	(A B) = 61, i.e., 0011 1101
^	Binary XOR Operator copies the bit if it is set in one operand but not both.	$(A \land B) = 49, i.e., 0011 0001$
~	Binary Ones Complement Operator is unary and has the effect of 'flipping' bits.	(~A) = -60, i.e,. 1100 0100 in 2's complement form.
<<	Binary Left Shift Operator. The left operands value is moved left by the number of bits specified by the right operand.	A << 2 = 240 i.e., 1111 0000
>>	Binary Right Shift Operator. The left operands value is moved right by the number of bits specified by the right operand.	A >> 2 = 15 i.e., 0000 1111

PROGRAM TO DEMONSTRATE BITWISE OPERATIONS

```
#include <stdio.h>
int main()
    unsigned int a = 60; /*60 = 0011 1100 */
    unsigned int b = 13; /* 13 = 0000 \ 1101 \ */
    int c = 0; c = a & b; /* 12 = 0000 \ 1100 \ */
    printf("Line 1 - Value of c is %d\n", c); c = a \mid b; /* 61 = 0011 1101 */
    printf("Line 2 - Value of c is %d\n", c); c = a \land b; /* 49 = 0011 0001 */
    printf("Line 3 - Value of c is %d\n", c); c = \sim a; /*-61 = 1100 0011 */
    printf("Line 4 - Value of c is %d\n", c); c = a \le 2; /* 240 = 1111 0000 */
    printf("Line 5 - Value of c is %d\n", c); c = a >> 2; /* 15 = 0000 1111 */
    printf("Line 6 - Value of c is %d\n", c);
    return 0;
```

Output

Line 1 - Value of c is 12

Line 2 - Value of c is 61

Line 3 - Value of c is 49

Line 4 - Value of c is -61

Line 5 - Value of c is 240

Line 6 - Value of c is 15

1. 19 Operators in C Contd...

f) Sizeof Operators

- This operator returns the size of its operand in bytes
- The sizeof operator always precedes its operand
 - Used to calculate the size of data type or variables
 - Can be nested
 - ☐ Returns the size in integer format
- Syntax looks more like a function but it is considered as an operator in c programming

```
/* Program for Sizeof Operators*/
#include<stdio.h>
int main()
int a;
float b;
double c;
char d;
printf("Size of Integer :%d\n\n",sizeof(a));
                                :%d\n\n",sizeof(b));
printf("Size of Floating Point
printf("Size of Double :%d\n\n",sizeof(c));
printf("Size of Charcter :%d\n\n",sizeof(d));
return 0;
```

Output

Size of Integer :2

Size of Floating Point : 4

Size of Double : 8

Size of Character : 1
